Lundy's Lost Plants – can you find any of these?

Shepherd's Cress *Teesdalia nudicaulis* (left)

A small white-flowered plant similar to Shepherd's Purse but with unequal petals (2 large and 2 small) and flowers in a compact head, usually open in April. Prefers dry open areas and very short turf or bare soil. Not seen since 1990s.

Small-flowered Catchfly *Silene gallica* (right)
Resembles a diminutive White Campion with tiny white or pale pink flowers. Usually in dry, sunny sites. Not seen since 1960s.

White Horehound *Marrubium vulgare* (below)

Used to grow in dry, sunny areas, such as around The Barn or in well-used gateways. Whorls of small white flowers are produced in July, and the leaves have a soft, downy texture. Host to the Horehound Plume Moth. Last seen in early 1980s.

Please enter full details of any finds in the log book, or contact Andrew Cleave on andrew@bramleyfrith.co.uk for further information.
